

Welcome from the President of IFESS

Dear Members,

The IFESS members have been looking forward to this combined conference with enthusiasm for the past 12 months.

This conference is an exceptional and first opportunity to give both groups a more complete picture of biomedical engineer's research from ideas to bench-top models, to animal studies, to technology development and transfer, to clinical trials where the neuro-modulation specialists apply the new therapeutic devices.

If successful, then we hope this will be the start of many collaborative ventures amongst our groups for the benefit and restoration of function in our neurologically impaired and suffering patients.

*Ross Davis,
IFESS Coordinator and V/President.*
